Portable Solution for Outdoors

Outdoor Battery Totem is built to survive the elements, with an IP65-rated outer case that protects them from all types of rainy conditions and dust particles. Our Totem is designed for harsh conditions.

Free Standing Display

With this creative portable digital signage solution, you'll stand out from the crowd. You no longer need a mains socket to send your digital messages, which opens up a whole new world of possibilities.

Plug and Play

The Battery Totem has an integrated HD media player that you can upgrade with a USB memory stick. Fill a USB memory stick with your photos and videos, then insert it into the display, which will copy the data to its internal flash memory. When you take out the memory stick, the screen will begin showing the photographs and movies in a loop.

Power Via Mains Plug

The Battery Totem can be powered via mains electricity supply by connecting the charging cable to wall socket.

Optional Network Upgrade

You can upgrade your screen remotely through Wi-Fi, LAN or 4G and this gives you the flexibility to work and control your device anywhere in the world.

High Brightness

Outdoor Battery Totem is the ideal combination of brightness and battery longevity. The screen is easily visible in outdoor spaces thanks to a high-brightness panel combined with Lithium-Ion Battery providing a 12 hours of display time without sacrificing the quality and brightness of the images.

Commercial Grade Panel and Components

With a commercial-grade panel having a 70,000-hour lifespan and high-quality components, the high-brightness Battery Totem may be used continuously 24 hours a day and seven days a week.

Battery Powered Display

The integrated lithium-polymer battery transforms the way digital signage is used. This slimline battery solution is commercial grade and provides over 12 hours of run time.

Integrated Castors

The Battery Totem is fully portable with fixed castors that may be simply moved by one person. Once the Totem is in place, these wheels can be secured to prevent it from moving.

Multiple Inputs

If you need to utilize the screen as a monitor, you can use the HDMI input or the VGA and 3.5mm audio jack inputs to link it to an external source, such as a PC or media player.

Interact with Digital Signage Displays with battery technology that you can easily position in any environment!
